Data protection impact assessment: users aged 16 and 17 (draft)

HEALTHCARE CROWN ACADEMY LTD · draft prepared 28 October 2026 for the owner to check, complete and sign. Proportionate, short-form DPIA following the ICO Children's code approach. **Facts marked "to confirm" must be checked before signing.**

1. Why this DPIA

Academy accounts are open from age 16, so the online services are likely to be accessed by children (under 18). The ICO expects a children-focused DPIA for such services. Academy AI was switched off on 28 October 2026, which removes the highest-risk processing; this DPIA covers what remains.

2. What we process for a 16–17-year-old

Processing	Data	Where	Basis	Notes
Account and sign-in	email, name (optional profile fields)	Supabase London	contract	shared sign-in for Academy apps and Evinca
Learning in MedLex, Carecraft, Serein, Lumen	progress, notes, settings	**on the user's device** (browser storage)	— (not sent to us)	Lumen sends text to an AI provider only if the user adds their own key
Gulf studio progress	answers, progress	user's account (Supabase)	contract	
Daily streak	date, apps used, streak	cookie on the device	consent (opt-in)	off by default
Payments	done by a parent/guardian or adult; payer confirms 18+ or parent/guardian	Stripe	contract / legal obligation	the child does not enter card details
Emails	order and cancellation emails to the account email	Resend (Ireland)	contract / legal obligation	no marketing without separate consent
Evinca	not available to under-18s (Evinca is 18+)	—	—	18+ confirmation before any paid review

No advertising, no analytics or tracking cookies, no profiling, no location data, no public profiles for Academy users, no chat between users (to confirm for every app).

3. Risks and measures

Risk to the young person	Likelihood / severity	Measures in place	Further action
Entering health or patient information (e.g. in Lumen notes)	Possible / medium	Clear warnings; Lumen notes stay on the device; no Academy AI	Keep warnings visible in Lumen and Carecraft
Wellbeing content (Serein)	Possible / medium	Serein data stays on the device; “Get help” signposting	Confirm signposting covers UK and non-UK users (to confirm)
Paying without understanding	Possible / medium	Adult/parent payer box; 7-day free trial; refund preview; confirmation and cancellation emails	—
Own AI key: text sent to a third party	Possible / medium	Off by default; key stays on device; provider notes and patient-data warning shown	Consider hiding the own-key option for under-18s, or a stronger warning (owner decision)
Marketing to children	Low / medium	Marketing only with a separate unticked choice	Do not send marketing to known under-18s (to implement if age is collected)
Account security	Low / medium	Supabase auth; password reset by email	—
Data kept too long	Low / low	Retention schedule; Close my account	—

4. Standards of the Children’s code (summary check)

Best interests · high-privacy defaults (streak off, no tracking) · data minimisation · no nudging to weaken privacy · clear, age-appropriate privacy information (**to do: a short plain-language summary for young users at the top of the privacy notice**) · parental controls not used · no profiling · no connected toys · tools for rights (Close my account, email requests).

5. Decision

Residual risk: **low to medium**, acceptable with the further actions above. No need to consult the ICO.

Signed: _____ (Director) · Date: _____ · Review date: one year, or when a new feature processes more data about users (for example if AI returns).
